

SCHOOL MENTAL HEALTH SERVICES

NOW AVAILABLE!

What is Classroom Clinic?

We are a team of mental health professionals who specialize in working with children using a team-based care model. We meet students where they are – literally and emotionally.

It's simple: we provide mental health services through telehealth during the school day. No long drives, no missed class time – just real help, when it's needed most.

Why mental health care at school?

Students today face a lot of challenges. Between school, social pressures, and growing up, it's normal to feel overwhelmed. Our services are convenient, confidential, and compassionate.

What types of services are available?

Classroom Clinic offers two different types of mental health care services for students:

- Individual Therapy
- Child Psychiatry Services (including medication management)

Our staff will work with you and your child to determine what services are appropriate.

How does team-based care work?

We believe mental health support works best when we're all working together. With parental permission, we collaborate with school staff and keep families informed – while respecting the student's privacy and voice.

How can I refer my child for services?

Contact your child's teacher, school nurse, counselor, or principal.

Where are appointments held?

Appointments are held at the school in a private and secure room. No school staff will be present during the visit.

Do parents attend the appointments?

Parents are required to attend all initial appointments and all appointments discussing medication. Parents do not need to attend most therapy appointments.

What about cost?

Services are billed to your insurance, just like other medical services. Families may be responsible for some of the cost, depending on your insurance plan.
